

Functionality

SMS dispatch on events

This module offers the possibility to send predefined text messages when certain events are triggered by PrestaShop.

Events

Delivery

Customer has received the goods.

Shipping

Goods have left the warehouse.

Incoming payment

An invoice amount has been cleared.

Invoice generation

An invoice has been issued.

Mass SMS

Sends a message to all customers registered in the shop. Useful to communicate events, discount promotions or similar news to the customers.

Signature

Allows you to attach a specific text to all messages sent. You can choose between prepending and appending. Prependind adds the signature to the beginning of the text. Appending adds the signature to the end of the text.

Placeholders

When creating messages, the personal salutation of customers can be an advantage. The following breakdown of placeholders is intended to provide information about which placeholders are available and what they mean.

{0}

First name

{1}

Last name

{2}

Order ID (if available)

Fixed sender name

By default, this module uses the shop name (PS_SHOP_NAME) as sender identifier for outgoing messages. You can change this in the module settings.

Installation

Via GitHub

1. Download the latest release as *.ZIP from [GitHub](#).
2. Unzip all files to /modules/sms77.
3. Navigate to the PrestaShop module manager and search for “sms77”.
4. Press the “Install” button and wait for the installation to finish.

Via Composer

1. Navigate to the project folder where PrestaShop is installed.
2. Enter the following console command to install: `composer require sms77/prestashop-module`.
3. Navigate to the PrestaShop module manager and activate “sms77”.
